

Ces profilés sont conçus de la même façon que les profilés pour fenêtres et châssis de la série Visoline, à l'exception de la coupure thermique.

Profondeur d'encastrement: dormant 51 mm, ouvrant 60 mm. Hauteur de feuillure de vitrage: 22 mm.

Vitrage: de 4 à 38 mm. Etanchéité: par joints E.P.D.M. extrudés.

#### Applications

- châssis et portes - fenêtres pour menuiserie intérieure et applications ne nécessitant pas de coupure thermique
- portes planes et portes à frappe à ouvrant simple et double
- portes coulissantes
- parement intérieur

Econoline is a system with no thermal insulation for fixed and opening structures. It is also suitable for building indoor walls with windows. 51 mm of profile depth, which is 6 mm more than the widely used depth, improves designing freedom and eases the constructors work.

The system is capable of accepting glazing with wall thickness between 3 and 38 mm.

Econoline is compatible with other Aliplast systems, glazing clamps, insulations and reinforcements are similar.

#### Applications

- windows, door and dividing walls in public and industrial buildings /office type rooms/, sliding windows
- the system is suitable to create sliding and swing doors and walls in any desired angle and also to enforce the already existing built in systems
